

California HIV Counseling and Testing Annual Report

January - December 1997

**Office of AIDS
HIV Prevention Research and Evaluation**

P.O. Box 942732, Sacramento, CA 94234-7320

Phone (916) 445-0553

The Office of AIDS HIV Counseling, Testing, and Training Section oversees state-funded HIV counseling and testing throughout California. The counseling and testing performed by these programs is reported to the Office of AIDS monthly. The HIV Prevention Research and Evaluation Section compiles this information and distributes it to interested parties in the form of quarterly and annual reports. The report introduction highlights important aspects of counseling and testing and describes the various tables that follow.

State of California	Gray Davis, Governor
Health and Welfare Agency	Grantland Johnson, Secretary
Department of Health Services	Diana M. Bonta', R.N., Dr.P.H., Director
Prevention Services	James W. Stratton, M.D., M.P.H., Deputy Director
Office of AIDS	Vanessa Baird, Acting Chief
Education and Prevention Branch	Harold Rasmussen, Chief
HIV Prevention Research and Evaluation	Steven R. Truax, Ph. D., Acting Chief Erin J. Griffin, M.A., Research Scientist

Guide to HIV Testing Tables

HIV counseling and testing are reported to the Office of AIDS by county/city local health departments (LHD's) through contracts and agreements with the state Office of AIDS (OA) to provide these HIV services. Programs funded through LHDs are divided into legislatively mandated anonymous testing services at Alternative Test Sites (ATS), and both anonymous and confidential services at county or municipal Sexually-Transmitted Disease and other clinics as well as other venues (referred to in the tables as "Non-ATS LHD"). In addition, testing services are provided by community-based organizations, which have contracts with the Office of Family Planning (OFP), under an interagency agreement. This report presents eighteen tables of basic client data that include all OA funded programs. Supplemental tables in the same format are also available for ATS, Non-ATS LHD, and OFP services. Data are accumulated annually.

Effective July 1, 1994, major changes were made to the system used to collect and report client data to the OA and a new, "client-centered" counseling approach was implemented. Further modifications to the data collection system were implemented in July 1997, including the introduction of a more comprehensive HIV Counseling and Testing Report Form (DHS 8458). Much more extensive risk behavior information is now being discussed with clients and collected for analysis. The tables contained in the current report include merged data collected using both the prior and current versions of the data collection form. Although the format of future reports will be modified to more fully present these data, the current tables will closely resemble those produced in previous reports in order to facilitate examination of trends throughout the year. It should be noted, however, that the "HIV Risk Behavior Category" variable presented in some tables is not strictly comparable with that variable as reported before July 1, 1994. For example, the category "Partner [who had a] Transfusion" has been eliminated. Data are provided voluntarily by clients, and the heading "Unknown" or "U" in any table means that an item of information was not provided by the client.

The basic tabulated information is a client visit/service unit. The service unit includes at least an HIV risk assessment session, and includes a test result if the client elected to be tested, as well as the disclosure session unless the client did not return for the result. A client may have obtained more than one HIV test in a reporting period, each test with its related services will be reported separately. It is important to keep in mind that these data represent counseling and testing services administered through these programs and that recipients of these services are a self-selected group. **Therefore these data should NOT be interpreted as representing discrete persons or the population of California in general.**

Table 1 presents the total testing and counseling services provided in 1997. Sums and percentages for each of the possible test results (positive, negative and indeterminate) are provided in columns 3-10. The number and percentage of services provided to clients choosing not to test are presented in columns 11-12. The number and percentage of total services provided to all clients during each month are in the last two columns.

Table 2 summarizes counseling and testing services by funding source.

Table 3 provides test results for clients by a categorical assignment of client risk. Behaviors reported by the client on the HIV Test Reporting Form (DHS 8458) are ranked by decreasing risk of exposure and the client is assigned the category producing the greatest probable risk for contracting HIV. These risk groups are further subdivided by sex. Risk groups are as they appear on the [HIV Test Reporting Form](#) under Client Behavior on the following page. Gay/IDUs are those who report both sex with men and injection of drugs. Hetero w/Multi Partners are those who mark 10 and reported at least two partners in the last year.

Tables 4 and 5 provide test result data for race/ethnicity and age groups. The first age group is 0-11 inclusive because children under 12 cannot request an HIV test without parental permission. Note that there are subtotals for sex at the bottom of Table 5.

Tables 6-10 are restricted to only those clients who were tested. **Tables 6 and 7** provide comparisons of race/ethnicity and age groups with risk groups and sex.

Table 8 shows female clients by pregnancy status, risk group, and test result.

Table 9 breaks down risk factors of clients by whether or not they had a sexually transmitted disease in the last 12 months and whether their decision to test resulted from an exposure reported to the client by sexual/needle-sharing partners or health workers.

Table 10 summarizes the number of sex partners in the last year clients reported by risk/sex groups.

Table 11 reports the number of prior HIV tests indicated by clients by risk groups and sex.

Tables 12-16 report the same information as Tables 6-10 but are limited to clients who only received HIV pretest counseling and did NOT test (or were tested under different funding).

Table 17 summarized the reporting for each county/city/agency by funded program. Percentages for all row totals are for each funding source. Various abbreviations are used especially for family planning sites to represent common components to names: PP = Planned Parenthood; CC - community clinic; CS = community services; HP = health program; etc.

Table 18 presents for each county/agency the number and percentage of tested clients who were reported as not returning for their test results and post-test counseling session.

Administrative Information

LHD/AGENCY NO. _____ SITE NO. _____

(Please circle only one choice in each column)

Counselor: Review/Assess these Introductory Issues

- Client's reason for HIV testing.
 Confidentiality/anonymity.
 Risk assessment process.
 Purpose of this form.
 What the HIV test measures.
 Meaning of results
(positive, negative, inconclusive).
 Accuracy of the HIV test.
 Impact of HIV on the immune system.

Counselor: Review/Assess these Testing Issues

- Window period.
 Date of any follow-up test.
 Process of testing.
 Coping with waiting for test results.
 Client's readiness to be tested.
 Offer testing, if appropriate.
 Set immediate, short- and long-term goals.
 Specific HIV prevention & support referrals.
 Encourage the client to return for results.

Client HIV Testing History

Number of prior HIV tests: (circle one)

(0) (1) (2) (3) (4) (5) (6) (7) (8) (9+)

Check if the client has used a home test kit

Last test result was (check one):

- (1) Positive ____/____ Mo / Year (3) Inconclusive ____/____ Mo / Year
 (2) Negative ____/____ Mo / Year (4) Did not return for results

Referrals

Client referrals: Record at both the risk assessment and disclosure sessions. Order by marking 1 for your primary referral. Other referrals should be numbered 2 or 3.

RA Disclosure

- ____ (01) NONE
____ (02) Referral list only

Other Testing

- ____ (03) CCS/HIV Children's Program

Counselor Notes _____

Client Sexual Risk History

(1) _____ Number of client's sex partners in the last 12 months.
(000-999 partners)

For ALL risk history boxes please enter the most recent year as follows:
0=NEVER, 1=within the last year, 2=within last 2 years, 3, 4, 5, 6, 7, 8,
9= 9 or more years ago, D=client declined to provide information.

Mark 0 for all partners that client NEVER had sexual contact with.
Mark "D" if client declines/refuses to provide information requested.
Leave Blank only to indicate that the risk was not assessed.

Has client ever had sex with: _____ (Key entry coding: D=*)
Record the most recent occurrence in each box: (mark as indicated above):

(2) One or more partners who had other partners.

(3) Male partner(s).

Sexual Activity & Barrier Use:

(Check one only for activities that apply)

Oral.	<input type="checkbox"/> (1) Never	<input type="checkbox"/> (2) Sometimes	<input type="checkbox"/> (3) Always

(If needles shared, mark next item.)

Cleaned Works. (1) Never (2) Sometimes (3) Always

(11) Diagnosed with an STD, specify: _____

(12) Received money/other items or services for sex.

(13) Received drugs for sex.

(14) Behavior resulting in other blood to blood contact (s/m, tattooing, piercing, cuts, etc.) or that allows blood contact with mouth, vagina or anus.

(15) Shared objects/fingers inserted in mouth, vagina or anus.

(16) Blood to blood exposure on the job.

(17) Job exposure blood known to be HIV+.

For items 18, 19 and 20, check box, if appropriate.

(18) Blood/blood product transfusion before 1985
(or in a country where blood was not tested for HIV).

(19) Child of HIV-infected woman.

(20) Other behavior, specify: _____

Counselor: Assess/ Review Testing Issues

- Cultural/peer influences.
- Demonstrate proper condom and barrier use.
- Role play with client to build needed skills.
- Safer sex guidelines.
- Partner risks as they relate to client risk.
- Communication of HIV risk/reduction w/partner(s).
- Domestic violence/sexual assault.
- Voluntary partner/spousal notification (self or assisted).
- Pregnancy concerns in relation to HIV risk.
- Maternal transmission (in utero, at birth, breastfeeding).
- Integration of birth control/risk reduction.

Counselor: Assess/ Review Drug and STD Issues

- Prevention/harm reduction/safer sex with IDUs.
- Demonstrate proper needle cleaning.
- Encourage/support substance abuse treatment and recovery.
- Alcohol/drug use with sex as a cofactor for HIV risk.
- STD history (e.g.: hepatitis, syphilis, gonorrhea, herpes, warts, chlamydia, NSU/V).
- Other sexual behaviors affecting STDs (rimming, etc.)
- Presence of STDs as a co-factor for HIV risk.
- Health effects of concurrent STD/HIV (e.g. PID)

A Summary Description of 1997 HIV Testing Clients

Prior to July 1, 1997 the Office of AIDS (OA) was using the HIV Reporting System (Version 3) in conjunction with the HIV Test Reporting Form. On July 1, 1997 OA introduced the HIV4 Counselor Information System, along with the revised HIV Counselor Information Form. Because of this, the first six months of 1997 were extracted from HIV3 and the remaining six months from HIV4. HIV4 data was recoded so that it could be analyzed in a manner consistent with HIV3 data.

Figure 1

Prepared by the Department of Health Services

In 1997, 216,418 HIV testing services were provided. This is a decrease in the annual testing volume from 1996, when 260,268 services were provided. The overall number of HIV positive test results also decreased from 1996 to 1997. There

were 2,848 HIV positive results in 1997 compared to 3,631 in 1996. Overall positivity rate was stable at 1.4%. The decline in the overall testing and HIV positive volume can be primarily attributed to the discontinuance of Office of Family Planning in mid-1997

HIV Testing in California January - December 1997

Number of Tests and HIV Positive Results by Program Type

**Figure 2**

Prepared by the Department of Health Services

HIV Testing in California January - December 1997

Percentage of Test Results by Race/Ethnicity

**Figure 3**

Prepared by the Department of Health Services

Although there were declines in the number of HIV positive results in both Alternative Testing Sites (ATS) and LHD non-ATS clinics, the overall number of tests declined in ATS clinics and increased in non-ATS clinics (see Figure 2).

The proportions of overall testing volume and HIV positive test results remained stable by race/ethnicity from 1996 to 1997. Among race/ethnicity groups, African Americans continued to represent a highly disproportionate share of the HIV positive results. African Americans represented 13% of total tests but accounted for 24% of all HIV positive results (see Figure 3).

In Figure 4, the number of HIV positive test results by race/ethnicity indicates that while most of the HIV

positive results were among men, African American women constituted the single largest group of women infected of any race.

The proportions of HIV positive test results by race/ethnicity illustrated in Figure 5 shows that African Americans of either sex had a greater probability of being HIV infected than any other group. **African American women were five times more likely to be HIV infected than white women.** African American men were twice as likely to be HIV infected as African American women. Overall, men represented 76% of the infections of known gender. While there are emerging subgroups with elevated rates of infection among women, men still comprise the bulk of the HIV positive tests.

Figure 4

Prepared by the Department of Health Services

HIV Testing in California January - December 1997

Percent of HIV Infected Clients by Race/Ethnicity

**Figure 5**

Prepared by the Department of Health Services

HIV Testing in California January - December 1997

Number of Tests by Age Group

**Figure 6**

Prepared by the Department of Health Services

Testing volume by age groups was distributed about the same for men and women (Figure 6). Women were somewhat more likely to test in adolescence than men.

For both men and women, infections were more likely to be detected among clients aged 30-39 (see Figure 7) although testing volume was highest among younger clients aged 20-29.

Figure 8 shows that, overall, men and women tested at different rates. Additionally, the overall decline in testing volume was 10% greater for women than for men (27% women

vs. 17% men), probably reflecting the change in test reporting by OFP clinics. Overall, the HIV infection rate was 2.0% for men and 0.5% for women which is unchanged from 1996.

Risk continues to determine the frequency of repeat testing. Figure 9 shows testing history for all clients and men who have sex with men (MSM). Overall, clients were most likely to be testing for the first time, however, nearly the opposite was true for MSMs. A large proportion of MSMs (nearly 40%) had tested five or more times.

HIV Testing in California January - December 1997 Percent of HIV Infected Clients by Age Group

Figure 7

Prepared by the Department of Health Services

**Figure 8**

Prepared by the Department of Health Services

**Figure 9**

Prepared by the Department of Health Services

No-show rates have received a great deal of attention in recent years. In mid-1997, follow-up of confidential no-show clients became a reimbursable service for the first time. Despite this, in 1997, no-show rates have continued to increase and remained at very high levels at non-ATS LHD clinics (including all LHD confidential testing). See Figure 10.

Among confidential clients who received a follow-up contact after

missing a test disclosure appointment in 1997, 53% subsequently attended the rescheduled disclosure session. This is a clear indicator that follow-up contacts for clients can greatly reduce HIV counseling and testing no-show rates in confidential sites.

MSM/IDU clients continue to be infected at the highest rate, followed by exclusively MSM and bisexual men (see Figure 11).

HIV Testing in California January-December 1997

Percent of No-Show Clients by Funding Type

Figure 10

Prepared by the Department of Health Services

**Figure 11**

Prepared by the Department of Health Services

Men who reported knowing that they had contact with an HIV infected partner were infected at a slightly higher rate than their female counterparts (5% vs. 3%). The infection rates for IDUs and sex workers were 2% and 1% respectively. The reverse pattern occurred for other STD infections. Those most at risk for HIV generally had the lowest rates of other STDs in the last year. The highest levels of other STDs were reported among female IDUs and male and female sex workers.

Summary

The current summary continues to reinforce the concerns about the inroads of HIV into the African American community. In California, HIV infections remain concentrated among men. No-show rates remain unacceptable among non-ATS LHD testing programs, however, follow-up contacts when implemented show great promise for reducing no-shows in most of these settings.
